Computer Network Practical Exam

SET-1

NAME   **: AKSHAT KUSHWAH**

EXAM ROLL NO.   **: 2002057004**

COLLEG ROLL NO.   **: 20201403**

QUESTION1. Simulate Cyclic Redundancy Check (CRC) error detection algorithm for noisy channel.

```cpp
CODE: #include<iostream>

using namespace std;
int gen,msg;
int lenght;
void rev(int num[],int len)
{
    int temp;
    for(int i1=0,i2=len-1;i1<len/2;i1++,i2--)
    {
            temp=num[i2];
            num[i2]=num[i1];
            num[i1]=temp;
    }
    return;
```

```cpp
}
void dec_to_bin(int dec,int bin_ary[])
{
        int tmp,i=0;
        tmp=dec;
        while(tmp!=0)
        {
                    bin_ary[i]=tmp%2;
                    tmp=tmp/2;
                    i++;
        }
        rev(bin_ary,i);
        lenght=i;
        for(int a=0;a<i;a++)
                cout<<bin_ary[a];
        cout<<endl;
        return;
}
 int sub_xor_bin(int divt[],int divr[],int len_div,int len)
 {
        int j=0,k;

        while(divt[j]!=1)
                        j++;
        if((len-j)<len_div)
                        return 0;
        for(int i=j,k=0;i<(len_div+j);i++,k++)
        {
                if(divt[i]==divr[k])
                                divt[i]=0;
                else
                    divt[i]=1;
        }
        return 1;
 }

 void app_end(int num[],int app,int &norm)
 {
        lenght=(norm+app)-1;
        for(int i=norm-1;i<lenght;i++)
                num[i]=0;
        cout<<"The number after appending is:\n";
        for(int i=0;i<lenght;i++)
                cout<<num[i]<<" ";
        cout<<endl;
```

```cpp
        norm=lenght;
}

 void division(int msg[],int &len_msg,int gn[],int len_gn)
 {
        int flag;
        app_end(msg,len_gn,len_msg);
        for(int i=0;i<len_msg-2;i++)
        {
                flag=sub_xor_bin(msg,gn,len_gn,len_msg);
                if(flag==0)
                break;
        }
        cout<<"The msg now after dividing:\n";
        for(int i=0;i<len_msg;i++)
                cout<<msg[i]<<" ";
        cout<<endl;
}
int main()
{
        int
msg_pass[20],msg_temp[20],chc,i=0,lenght_msg,lenght_gen,rem[6],ori_msg_len;
        cout<<"Enter the message to be passed(in decimal):\n";
        cin>>msg;
    cout<<"The message in binary code:\n";
    dec_to_bin(msg,msg_pass);
        lenght_msg=lenght;
        cout<<"Enter the generator number i.e, the divisor:(in decimal)\n";
        cin>>gen;
        cout<<"the binary value of generator is:\n";
        int genr[6];
        dec_to_bin(gen,genr);
        lenght_gen=lenght;
        for(int j=0;j<lenght_msg;j++)
                msg_temp[j]=msg_pass[j];
        ori_msg_len=lenght_msg;
        division(msg_pass,lenght_msg,genr,lenght_gen);
        i=0;
        while(msg_pass[i]!=1)
        {
                        i++;
                        if(i>=lenght_msg)
                        break;
```

```cpp
        }
        int r=ori_msg_len;
        if(i<lenght_msg)
        {
                        cout<<"The crc remainder is:\n";
                        for(int j=i;j<lenght_msg;j++)
                        {
                                        cout<<msg_pass[j]<<" ";
                                        msg_temp[r]=msg_pass[j];
                                        r++;
                        }
                        cout<<endl;
        }
        cout<<"The msg to be passed:\n";
        for(i=0;i<r;i++)
                        cout<<msg_temp[i]<<" ";
        cout<<endl;
        return 0;
}
```

OUTPUT:

```
Enter the message to be passed(in decimal):
1234
The message in binary code:
10011010010
Enter the generator number i.e, the divisor:(in decimal)
5
the binary value of generator is:
101
The number after appending is:
1 0 0 1 1 0 1 0 0 1 0 0 0
The msg now after dividing:
0 0 0 0 0 0 0 0 0 0 0 0 1
The crc remainder is:
1
The msg to be passed:
1 0 0 1 1 0 1 0 0 1 0 1
